Application No.: 09/960673 Docket No.: SMQ-076 (P6310)

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method of network storage in a network with a plurality of storage locations having attributes, said attributes being characteristics of said storage locations, a the method; comprising the steps of:

providing a software facility in communication over the network with the plurality of storage locations, the software facility interfaced with said network for identifying and allocating said-the storage locations to a storage owner based on the at least one attributes of said-the storage locations;

receiving with said the software facility a network storage policy from an authorized user, said the authorized user having authority to control access to said the storage locations on said the network, said the storage policy including attribute requirements for at least one of said storage locations; and

programmatically applying said the storage policy to storage decisions on said the network using said the software facility, said the storage decisions determining where data on said the network is stored.

- 2. (Original) The method of claim 1 wherein said authorized user selects said storage location attributes in said network policy from a list of storage location attributes.
- 3. (Currently amended) The method of claim 1, comprising the further step of:

 configuring a new storage location from at least two of the plurality of storage locations in order to provide specified attributes pursuant to said network storage policy.
- 4. (Cancelled)
- 5. (Currently Amended) The method of claim <u>1</u>4 wherein a storage location is allocated based on matching a requested storage location attribute with the <u>a</u> storage location attribute identified by said the software facility.
- 6. (Currently Amended) The method of claim 1.4 wherein a selected one of said storage locations is allocated based on matching a requested storage location attribute with an attribute of a new storage location dynamically configured by said software facility.
- 7. (Currently amended) The method of claim 1.4, comprising the further step of:

Application No.: 09/960673 Docket No.: SMQ-076 (P6310)

placing an unallocated storage location into a pool of storage locations available to said software facility.

- 8. (Currently Amended) The method of claim 7 comprising the further step of:

 placing a storage location into a pool of storage locations unavailable to said
 software facilitymarked as previously allocated.
- 9. (Currently Amended) The method of claim 7 comprising the further step of: placing a newly discovered unallocated storage locations into a pool of storage locations awaiting further action by said the software facility, said the newly discovered unallocated storage locations not having been previously identified by said the software facility.
- 10. (Currently amended) The method of claim <u>1</u>4 wherein said software facility uses the Service Location Protocol (SLP) to identify available devices attached to said network.
- 11. (Currently Amended) The method of claim <u>1</u>4 wherein at least one of said-the plurality of devices interfaced with said network with storage locations thereon is a RAID (Redundant Array of Inexpensive/ Independent Disks) set.
- 12. (Currently Amended) The method of claim 1/4 wherein a storage location with a specified attribute is provided by dynamically configuring a storage location in response to a request from a user of said the host electronic device interfaced with said network.
- 13. (Currently Amended) The method of claim 14, comprising the further steps of:

 setting a network policy for data storage, said the policy including storage
 location attributes requested by an authorized user, said the authorized user having authority to
 make network storage decisions; and

configuring a new storage location from at least two of the plurality of storage locations in order to provide specified attributes pursuant to said the network policy.

- 14. (Currently amended) The method of claim <u>1</u>4 wherein said software facility is located on said host electronic device.
- 15. (Currently Amended) A medium holding computer-executable instructions for a method of network storage in a network with a plurality of storage locations having attributes, said

Application No.: 09/960673 Docket No.: SMQ-076 (P6310)

attributes being characteristics of said storage locations, a medium holding computer executable instructions for a the method; comprising the steps of:

providing a software facility intorfaced communicating over with said the network with the storage locations, the software facility for identifying and allocating suid-the storage locations based on the attributes of said the storage locations, said allocation being the association of a storage location with an owner, said-the owner having permission to write data to said-the storage location and read data from said-the storage location;

receiving with said the software facility a network storage policy from an authorized user, said the authorized user having authority to make storage decisions on said the network, said-the storage policy including attribute requirements for storage locations; and

the storage policy including attribute requirements for storage locations; and programmatically applying said-the storage policy to storage decisions on said-the said-the software facility, said-the storage decisions determining where data on ork is stored.

The method of claim 15 wherein said authorized user selects said storage utes in said network policy from a list of storage location attributes.

The method of claim 15, comprising the further step of: automatically configuring storage locations to provide specified attributes id network storage policy. network using said-the software facility, said-the storage decisions determining where data on said the network is stored.

- 16. (Original) The method of claim 15 wherein said authorized user selects said storage location attributes in said network policy from a list of storage location attributes.
- 17. (Original) The method of claim 15, comprising the further step of: pursuant to said network storage policy.

18-21. (Cancelled)
